Biography

Dr. Nevin Belder is a Research Associate Scientist at Ankara University Biotechnology Institute. Her major research interests include the discovery of new prognostic and diagnostic biomarkers and identifying the central molecular causes of cancer, especially colorectal cancer. Most of her work is in cancer genomics, transcriptomics, and bioinformatics, with the aim of developing predictors of therapeutic response and prognosis. She worked on various projects aimed at determining novel diagnostic and prognostic biomarkers for cancer, using data obtained from high-throughput genome, methylome, and transcriptome analyses during her Ph.D. Dr. Nevin also gained experience in the role of long noncoding RNAs responsible for tamoxifen resistance in ER α -positive breast cancer during her post-doc position.

Dr. Belder has been leading her own research group at Ankara University Biotechnology Institute, Systems Biotechnology Advanced Research Unit (SISBIOTEK), since 2022. The main focus of Belder's laboratory is elucidating the pathological mechanisms of tumor initiation and progression to identify novel treatment strategies, prognostic, and predictive biomarkers using systems biology approaches. Her research group is also interested in exploring cell-cell communications via exosomes and their functional role in cancer.
